5)hook everything back up including 3sfe ecu to run engine. ** Pray ecu can deal with extra stroke/air and change fuel delivery to accomodate** 6) ** pray that i don't need to swap injectors to do this to get engine to running** - Does anyone know if there is much in the way of difference between the injectors? basically I'm looking to run the 5sfe like a stroked 3sfe.

3S-FE was the worse engine the MR2 was fitted with, The 5S-FE is its 2.2l bigger brother, the 3S-GE makes much more power than both depending on the year and the 3S-GTE is the Turbo. If you are swapping the engine DONT go backwards to a 3S-FE and your engine being "tired" wont have anything to do with the block, aparently the 5S-FE's are very reliable and have strong blocks.

If you do then you can use the pinout to cross reference where everything is and solder onto the pins from an old ecu just break the old circuit board off and use the plug in bit on its own. HOWEVER the way I did it that makes things so much less messy and confusing is get an old 5s loom, doesn't matter what from can use a celica one or anything all you want is the plugs.
