App Inventor Tutorial 13 - [PDF Document]

App Inventor provides two components to facilitate database activity: TinyDB and TinyWebDB. TinyDB is used to store persistent data directly on the Android device; this is useful for highly personalized apps where the user won't need to share her data with another device or person, as in No Texting While Driving.

Working with Databases - Appinventor

TinyWebDB is an App Inventor component that allows you to store data persistently in a database on the web. Because the data is stored on the web instead of a particular phone, TinyWebDB can be used to facilitate communication between phones and apps (e.g., multi-player games).

Creating a Custom TinyWebDB Service

You can see the all new rewrite at Using TinyDB in App Inventor TinyDB is a database used to store and retrieve values to semi-permanent storage on your phone or tablet. Unlike variables, which vanish when your app closes or your phone is turned off, values stored in the TinyDB are retained and can be accessed again, much later.

tinywebdb | Learn 2 Code with MIT App Inventor

App Inventor variables are stored in RAM memory – and the content of RAM is erased or reset whenever the power is turned off. TinyDB, on the other hand, stores values in FLASH RAM, where the values remain even when the power is turned off.
