Subsequently, the choice and timing of the appropriate reconstructive strategy ... deemed essential to capture the experience and practice of different realities in multiple countries, beyond the ...

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Examining the Examinations looks at the required advanced science and mathematics examinations taken by university-bound students in seven countries. This research focuses on topics covered, types of questions used, and performance expected from students. The book concentrates on comparisons of the examinations, illustrating their similarities and differences with selected questions taken from the actual examinations. The international comparisons presented offer a window on educational 'laboratories' in seven countries.

Review for the AP Mathematics Test covers Calculus AB and Calculus BC. Eight practice tests reflect the actual exam in question types, length and degree of difficulty. Review sections cover functions, limits and continuity, differentiation, integration, applications, and sequences and series. All questions are answered and explained.

Includes a section called Program and plans which describes the Center's activities for the current fiscal year and the projected activities for the succeeding fiscal year.

Developing mathematically promising students.

This book brings together psychometric, cognitive science, policy, and content domain perspectives on new approaches to educational assessment -- in particular, constructed response, performance testing, and portfolio assessment. These new assessment approaches -- a full range of alternatives to traditional multiple-choice

tests -- are useful in all types of large-scale testing programs, including educational admissions, school accountability, and placement. This book's multi-disciplinary perspective identifies the potential advantages and pitfalls of these new assessment forms, as well as the critical research questions that must be addressed if these assessment methods are to benefit education.
