A manual transmission requires the driver to operate the gear stick and clutch in order to change gears (unlike an automatic transmission or semi-automatic transmission, where one or both of these functions are automated).Most manual transmissions for cars allow the driver to select any gear ratio at any time, for example shifting from 2nd to 4th gear, or 5th to 3rd gear.

**Manual transmission - Wikipedia**

Because of the low RPM torque of a turbo-diesel engine, one can up shift earlier to save fuel. However, don't upshift so early that the engine lugs. In vehicles with exhaust gas recirculation (EGR), particulate soot combines with oil from the turbo and can build up on the walls of the intake.
