**Review/Answers**  
mRNA, with uracil taking the place of adenine. During translation, each base in the mRNA results in an amino acid being added to a chain, and a protein is formed. DNA unwinds into two separate strands, and a complementary copy of each is produced during replication.

## *EOC Review - DNA/RNA/Protein Synthesis Quiz - Quizizz*

Like DNA, RNA is composed of nucleotide bases. RNA however, contains the nucleotides adenine, guanine, cytosine, and uracil (U). When RNA polymerase transcribes the DNA, guanine pairs with cytosine and adenine pairs

...

Q. Proteins are made at the \_\_\_\_\_ which is located outside the nucleus. We need to make proteins and DNA holds the instructions. DNA cannot leave the \_\_\_\_\_ therefore it makes a copy of itself in the form of \_\_\_\_\_ which can leave the nucleus. mRNA takes the instructions to the ribosome which can start producing \_\_\_\_\_.

Unit Test for Grades 8-12.  
This is a unit test on DNA,  
RNA, and Protein synthesis.  
The test is composed of 86  
questions. There are  
multiple choice, matching,  
and fill in the blank  
questions. Complete answer  
key is included. This test  
is appropriate for a Biology  
I or a Biology II class.  
Topics covered include: 1.
