Ultracold Neutrons is a guide to a fascinating topic. It describes how a simple new idea in experimental neutron physics has changed the landscape of what is often called 'fundamental physics.' Ultracold neutrons (UCNs) are neutrons moving at the low speed of a bicycle rider. They were produced for the first time 50 years ago (in 1968) and

are distinguished from ordinary neutrons with much higher energies by their ability to be confined in 'neutron bottles' for durations up to several hundred seconds. This is possible since they are reflected back and forth from the container walls many thousands of times with very little loss. As a result of these long observation times, their properties and interactions with the environment can be studied with superb precision. Directed towards a general readership, this book is an excellent introduction to a field of research that is not highly specialized but touches on many aspects of our physical world, classical as well as quantum mechanical.

China's historic accession to the World Trade Organization (WTO) in November 2001 not only represents an important

milestone in the country ' s transition to a market economy and integration into the global economy, but is also among the most important events in the history of the WTO and the multilateral trading system. China and Global Trade Governance: China's First Decade in the World Trade Organization provides us with some fresh empirical data to assess the country ' s behaviour in the liberal international economic regime. Such an assessment is both timely and necessary as it can help us better understand China ' s role in the evolving structure of global economic governance, in addition to shedding light on the broader debate about the implications of the rise of China for the international system. Through a thorough examination of China ' s WTO compliance record and its experience in multilateral trade

negotiations, this book seeks to better understand the sources of constraints on China ' s behaviour in the multilateral trade institution as well as the country ' s influence on the efficacy of the World Trade Organization. In doing so, this project speaks directly to the following questions raised by China ' s unprecedented ascent in the international system: Is China a rule maker, rule follower, or rule breaker in international regimes? Is Beijing a responsible stakeholder capable of making positive contributions to global trade governance in the long-term?
