Examining four dichotomies in Spanish, this book shows how to reduce the six to ten rules common in textbooks for each contrast to a single binary distinction. That distinction is a form of totality vs. part, easier to see in some of the dichotomies, but present in all of them. Every chapter is example-driven, and many of those examples come from writing by students. Readers can test out for themselves the explanation at work in the examples provided. Then, those examples are explained step by step. In addition to examples from writing by college students, there are examples from RAE (Real Academia Española), from scholars, from writers, from Corpes XXI (RAE), from the Centro Virtual Cervantes, and from the Internet. Many of those examples are presented to the reader as exercises, and answers are provided. This book was written for teachers of Spanish as a second language (L2) and for minors or majors of Spanish as an L2. It will also benefit teachers and learners of other L2s with some of these dichotomies.

This textbook is for three groups of people involved with Spanish: first, for the students enrolled in Spanish/English linguistics courses; second, for college and university librarians; and third, for every Spanish language teacher/professor. We suggest that those who have courses of this type consider this book as a text for those classes. For those that do not have them, we recommend that you offer them and use this book. We also believe that it would also be an ideal book for libraries in which people interested in the topic can go to find out information, since there are no available texts as comprehensive as this one. It is also a book that all Spanish teachers/professors should have on their desks and shelves for reference purposes, being that it contains a lot of information about linguistics and grammar.
