The engine block is covered with the DOHC VTEC head. This was the first Honda engine with a VTEC system. The diameter of intake valve was 33 mm, of exhaust valves — 28 mm, valve stem diameter was 5.5 mm. Camshafts were rotated by the timing belt to be replaced after every 60,000 miles (100,000 km) of travel.

Honda B16A engine (B16B) | Specifications, features, tuning

VTEC is a system developed by Honda to improve the volumetric efficiency of a four-stroke internal combustion engine, resulting in higher performance at high RPM, and lower fuel consumption at low RPM. The VTEC system uses two camshaft profiles and hydraulically selects between profiles. It was invented by Honda engineer Ikuo Kajitani. It is distinctly different from standard VVT systems which change only the valve timings and do not change the camshaft profile or valve lift in any way.
