Physiology
Skeletal System

The skeletal system includes all of the bones, cartilages, and ligaments of the body that support and give shape to the body and body structures. The

File Type PDF

Human

skeleton

consists of the bones of the body. For

adults, there are 206 bones in the skeleton.

Younger individuals have higher numbers of bones because some bones fuse together during childhood and

File Type PDF

Human

adolescence to
form an adult
bone.

Skeletal System

Divisions of the Skeletal System

| Anatomy and Physiology I

Clavicle. The
clavicle, or
collarbone, is a
slender, doubly
curved bone; it
attaches to the

Functions of the Skeletal System

- Anatomy ...

The science of
physiology often
studies the
functions of
different body
parts or organ
systems of a

File Type PDF

Human

living creature.

In this light,
the physiology
of the skeletal

system can be

enumerated in

five words:

shape, support,

protection,

storage, and

movement. These

functions apply

both to the

human body and

Sex differences
in human

physiology are
distinctions of
physiological
characteristics
associated with

File Type PDF

Human

either male or female humans.

These can be of several types, including direct and indirect.

Direct being the direct result of differences prescribed by the Y-

chromosome, and indirect being a characteristic

File Type PDF

Human

influenced indirectly (e.g. hormonally) by the Y-chromosome.
