This is a book designed to give principals advice on how to do the job well. The book is buttressed by research where appropriate, and it pays particular attention to the principal ' s basic conundrum, which is this: while he/she is arguably the face and leader of the school, he/she is often the person with the least actual power in the system. The book takes a realistic look at the principal ' s power, opportunities, and structural and political limitations and then teaches its readers how successful principals find a way forward in spite of those challenges.

Recent changes in policy and law, along with advances in research, are making it necessary for an increasing number of school psychologists, special educators, and teacher consultants to develop skills in areas other than psychoeducational assessment. In response to this need, many professionals and students are expanding their careers to include the field of instructional consultation -- the synthesis of school-based consultation techniques and a solid knowledge of effective instructional practices. This book examines the major themes of instruction and gives a step-by-step outline of the consultation process from referral to the final report.

This book argues that even in today's high-stakes testing environment, "teaching to the test" need not be teachers ' only focus as they introduce young children to mathematics. Judith McVarish demonstrates how building a community of learners and using problem solving to engage students can help teachers encourage students ' disposition to creative thinking and reasoning—skills that can otherwise become lost due to the pressure of the many other expectations placed upon both teachers and students. This book offers strategies for infusing mathematics learning and reasoning into elementary school classrooms while meeting curriculum and testing mandates. The teacher researcher component of each chapter provides a vehicle for teachers to bring their own expertise and questions back into the teaching and learning equation.

There are many master teachers who have excellent organizational and interpersonal relation skills who think about becoming assistant principals and principals. *Becoming a School Leader* is designed primarily for these master teachers as they contemplate the next step in their professional careers.

"Most educators are skilled at planning instruction and determining what they will do during the course of a lesson. However, to truly engage students in worthwhile, rigorous cognition, a profound shift is necessary: a shift in emphasis from teaching to learning. Put another way, we know that whoever is doing the work is also doing the learning—and in most classrooms, teachers are working much too hard. Authors John V. Antonetti and James R. Garver are the designers of the Look 2 Learning model of classroom walkthroughs. They've visited more than 17,000 classrooms—examining a variety of teaching and learning conditions, talking to students, examining their work, and determining their levels of thinking and engagement. From this vast set of data, they've drawn salient lessons that provide valuable insight into how to smooth the transition from simply planning instruction to designing high-quality student work. The lessons John and Jim have learned from their 17,000 (and counting) classroom visits can't be wrong. They share those lessons in this book, along with stories of successful practice and practical tools ready for immediate classroom application. The authors also provide opportunities for reflection and closure designed to help you consider (or reconsider) your current beliefs and practices. Throughout, you will hear the voices of John and Jim—and the thousands of students they met—as they provide a map for shifting the classroom dynamic from teaching to learning."
