Industrial process tomography (IPT) is becoming an important tool for Industry 4.0. It consists of multidimensional sensor technologies and methods that aim to provide unparalleled internal information on industrial processes used in many sectors. This book showcases a selection of papers at the forefront of the latest developments in such technologies.

Adopting a microhistory approach, Fair and Unfair Trials in the British Isles, 1800-1940 provides an in-depth examination of the evolution of the modern justice system. Drawing upon criminal cases and trials from England, Scotland, and Ireland, the book examines the errors, procedural systems, and the ways in which adverse influences of social and cultural forces impacted upon individual instances of justice. The book investigates several case studies of both justice and injustice which prompted the development of forensic toxicology, the implementation of state propaganda and an increased interest in press sensationalism. One such case study considers the trial of William Sheen, who was prosecuted and later acquitted of the murder of his infant child at the Old Baily in 1827, an extraordinary miscarriage of justice that prompted outrage amongst the general public. Other case studies include trials for treason, theft, obscenity and blasphemy. Nash and Kilday root each of these cases within their relevant historical, cultural, and political contexts, highlighting changing attitudes to popular culture, public criticism, protest and activism as significant factors in the transformation of the criminal trial and the British judicial system as a whole. Drawing upon a wealth of primary sources, including legal records, newspaper articles and photographs, this book provides a unique insight into the evolution of modern criminal justice in Britain.

Sir David Cox's most important papers, each the subject of a new commentary by Professor Cox.

This volume constitutes the refereed proceedings of the 24th EuroSPI conference, held in Ostrava, Czech Republic, in September 2017. The 56 revised full papers presented were carefully reviewed and selected from 97 submissions. They are organized in topical sections on SPI and VSEs, SPI and process models, SPI and safety, SPI and project management, SPI and implementation, SPI issues, SPI and automotive, selected key notes and workshop papers, GamifySPI, SPI in Industry 4.0, best practices in implementing traceability, good and bad practices in improvement, safety and security, experiences with agile and lean, standards and assessment models, team skills and diversity strategies.

This choice collection contains some of the most significant contributions to psychoanalytic and psychological understanding of the effect of object loss on adults and children. Designed for psychoanalysts, psychotherapists and students of psychoanalysis and psychotherapy, this important volume focuses on those contributions most directly relevant to the clinical situation, without neglecting fundamental descriptive and theoretical contributions. Rita V. Frankiel has culled the literature on object loss and assembled the most salient and conceptually powerful contributions to the field. Each paper is introduced with a brief summary of its contribution to the development of our understanding of object loss. This valuable resource thus provides the serious student of object loss with a ready source of the most important materials on the subject. Contributors: Karl Abraham, Sol Altschul, John Bowlby, Helene Deutsch, J. Marvin Eisenstadt, George Engel, Joan Fleming, Sigmund Freud, Erna Furman, Robert Furman, Edith Jacobson, Melanie Klein, Paul Lerner, Erich Lindemann, Hans W. Loewald, Marie E. McAnn, George Pollock, Hanna Segal, Chistina Sekaer, Vamik D. Volkan, and Martha Wolfenstein.

Considers the application of modern control engineering on digital computers with a view to improving productivity and product quality, easing supervision of industrial processes and reducing energy consumption and pollution. The topics covered may be divided into two main subject areas: (1) applications of digital control - in the chemical and oil industries, in water turbines, energy and power systems, robotics and manufacturing, cement, metallurgical processes, traffic control, heating and cooling; (2) systems theoretical aspects of digital control - adaptive systems, control aspects, multivariable systems, optimization and reliability, modelling and identification, real-time software and languages, distributed systems and data networks. Contains 84 papers.

This book constitutes late breaking papers from the 22nd International Conference on Human-Computer Interaction, HCII 2020, which was held in July 2020. The conference was planned to take place in Copenhagen, Denmark, but had to change to a virtual conference mode due to the COVID-19 pandemic. From a total of 6326 submissions, a total of 1439 papers and 238 posters have been accepted for publication in the HCII 2020 proceedings before the conference took place. In addition, a total of 333 papers and 144 posters are included in the volumes of the proceedings published after the conference as " Late Breaking Work" (papers and posters). These contributions address the latest research and development efforts in the field and highlight the human aspects of design and use of computing systems. The 34 late breaking papers presented in this volume were organized in two topical sections named: Virtual, Augmented and Mixed Reality Design and Implementation; and User Experience in Virtual, Augmented and Mixed Reality.

In this profound and subtle study, a practising psychoanalyst explores the dynamics of the interaction between the patient and the analyst. Michael Feldman draws the reader into experiencing how the clinical interaction unfolds within a session. In doing so, he develops some of the implications of the important pioneering work of such analysts as Klein, Rosenfeld and Joseph, showing in fine detail some of the ways in which the patient feels driven to communicate to the analyst, not only in order to be understood by him, but also in order to affect him. The author's detailed descriptions of the clinical process allow the reader to follow the actual process that enables the patient to get into contact with thoughts and feelings of which he or she was previously unconscious or only vaguely aware. Feldman makes the reader aware of the constant dynamic interaction between the patient and the analyst, each affecting the other. He shows how the analyst has to find a balance between doubt, uncertainty and confusion in himself and through this process may arrive at an understanding of what is happening, and by formulating this understanding the analyst can make a significant contribution to the process of psychic change. This collection of essays not only throws light on fascinating questions of technique, but also reflects on elements that are fundamental to psychoanalytic work. It is essential reading for practising psychoanalysts and those in training, as well as anyone with a general interest in the psychoanalytic relationship between the client and the therapist in the consulting room.

It is one thing to write a good scientific paper; it is quite another thing to get it published. Don Harris draws upon nearly a quarter of a century of experience as an author and reviewer of research papers, and ultimately as a journal editor. By his own admission, it contains all the things he wished that his mentors had told him 25 years ago, but did not. The material in the book is drawn from many years of finding all these things out for himself.
