## **Wheel Building**

Most literature on wheel building focuses purely on building the wheels. Little attention is given to the finer details of the component parts. A wheel can only be good if it is built well.

expensive of the three

titles. I would  
recommend either of

these - or better yet,

both - over "The Art of  
Wheel Building".

**The Art of**

**Wheelbuilding: A**

fitting spokes when building a bicycle wheel is known as lacing, presumably because they're passed through holes and then tightened, like shoelaces. As the spokes cross over each other, it could just as easily be called weaving.

**Building a bicycle wheel - Patrick Taylor**

*Page 26/29*

Read PDF

Professional

A professionally built spoked wheel is like a jewel. When the wheel turns, the quality components glitter like gold and silver. The gentle hum from the spokes, the feeling on straights, in corners, uphill and the immediate reaction when accelerating can be compared to nothing else in the world.
