This book discusses the strategic shift in ownership of Aramco, the Saudi Arabian Oil Company, and its potential impact on Aramco's role in a post- privatized world. Scheduled to become an IPO in 2018, Aramco is on the verge of becoming the largest IPO on the market. As the world ' s largest oil and gas company, Aramco ' s impending privatization has important implications for the world ' s petroleum market. This book, therefore, undertakes an analysis of Aramco, examining its history, its current role in Saudi Arabia ' s economy, and its future role as an IPO. The chapters highlight the likely outcomes for Aramco in proceeding with its planned IPO and privatization, as well as the various policy options and models available to it by drawing on the privatization of other national oil companies in Norway , Russia, Brazil, and China. The book also explores the complexities that will be involved in transforming Saudi Aramco to a privatized company—albeit with significant government oversight and control—and addresses key questions on the issues likely to be faced, such as IPO pricing, the listing, domain, and market capacity, and potential stakeholders. As such, this book will be of interest to academic researchers studying energy economics, energy policy, and the political economy of the Middle East, as well

Advances in Materials and Pavement Performance Prediction contains the papers presented at the International Conference on Advances in Materials and Pavement Performance Prediction (AM3P, Doha, Qatar, 16- 18 April 2018). There has been an increasing emphasis internationally in the design and construction of sustainable pavement systems. Advances in Materials and Pavement Prediction reflects this development highlighting various approaches to predict pavement performance. The contributions discuss links and interactions between material characterization methods, empirical predictions, mechanistic modeling, and statistically-sound calibration and validation methods. There is also emphasis on comparisons between modeling results and observed performance. The topics of the book include (but are not limited to):

- Experimental laboratory material characterization
- Field measurements and in situ material characterization
- Constitutive modeling and simulation
- Innovative pavement materials and interface systems
- Non-destructive measurement techniques
- Surface characterization, tire-surface interaction, pavement noise
- Pavement rehabilitation

Case studies Advances in Materials and Pavement Performance Prediction will be of interest to academics and engineers involved in pavement engineering.

This pocket-size book may help you figure out how to be a qualified safety practitioner regardless of your nationality, faith, and current educational achievements. My objective is to share my journey as a safety practitioner. I hope you will find beneficial information based on my twelve-year personal experience in the construction industry as a safety professional.

Dennis Nolan, drawing on decades of experience as a well-known safety author and senior loss prevention specialist at Saudi Aramco, provides the essential procedures and checklists in *Safety and Security Review for the Process Industries*. In addition to guiding the reader through the selection and execution of efficient and complete hazard analysis and safety reviews (such as HAZOP, PHA, What-If, SVA, LOPA, Bowtie), Nolan shares his personal experience and illustrates procedures with real-world examples. Updated throughout to reflect changing practices, the fourth edition expands its scope to include maintenance, exploratory drilling, and governmental regulation updates. It adds best practice guidelines on CHAZOP reviews, expands on threats in the security vulnerability analysis, and includes more information on chemical process facilities and hydrocarbon/chemical plant safeguards. Up-to-date form templates and “what-if” checklists are also available for purchasers of the book to download, making this a complete safety review toolkit. Helps you to achieve compliance and avoid disasters: provides the checklists and best-practice guidance needed to negotiate the labyrinth of hazard analysis and safety review procedures. Keeps your knowledge
