This book explores the changing evolution of memory debates on places intimately linked to the lives and deaths of different fascist, para-fascist and communist dictators in a truly transnational and comparative way. During the second decade of the twenty-first century, a number of parallel debates arose in Italy, Spain, Portugal, Albania, Austria and other European countries regarding the public management

by democratic regimes of those sites of memory that were directly linked to the personal biographies of their former dictators. The ways in which each democracy deals with the dead bodies, mausoleums and birthplaces of the dictators vary considerably, although common questions occur, such as whether oblivion or re-signification is better, the risk of a posthumous cult of personality being established and the extent to which the shadow of the authoritarian past endures in these sites of memory. Using the concept of "sites of the dictators", the author explains why it is so difficult to deal with some sites of memory linked to dead autocrats, as those places contribute directly or indirectly to humanizing them, making their remembrance more acceptable for the present and future generations, and discusses the potential of the "Europeanization" of these "dark" memories of the past. Exploring the imperatives of memory politics and how these are reconciled with local actors interested in exploiting the dictator's remembrance, this book will be useful reading for students and scholars of history, politics and memory studies.

Located on the site of the original Sears Tower, the historic Sears, Roebuck and Company catalog plant is one of the nation's most unique landmarks. Representing American ingenuity at its best, Richard Sears and Julius Rosenwald combined technology, commerce, and social science with bricks and mortar to build "the World's Largest Store" on Chicago's West Side. Completed in 1906, the plant housed nearly every

conceivable product of the time: clothing, jewelry, furniture, appliances, tools, and more. The complex employed 20,000 people, and merchandise orders were processed and delivered by rail—within the same day. During the first two decades of the 20th century, almost half of America's families shopped the over 300 million catalogs published in that era. WLS (World's Largest Store) Radio broadcasted the Gene Autrey show from the top of the tower, and the first Sears retail store opened here on Homan Avenue and Arthington Street. In 1974, Sears moved to the current Sears Tower. Thanks to many individuals who fought to save these architecturally and historically important treasures, the administration building, the original Sears Tower, the catalog press-laboratory building, and the powerhouse remain today. There are currently plans for redeveloping these buildings into housing, office, and retail space. A new Homan Square Community Center stands on the site of the merchandise building.

Reprint of rare original catalog includes huge illustrated selection of building materials, fixtures and trimmings, complete with descriptions, specifications, and prices. Hundreds of black-and-white illustrations.

Tradecraft is a term used within the intelligence community to describe the methods, practices, and techniques used in espionage and clandestine investigations. Whether the practitioner is a covert agent for the government or an identity thief and con man, the methods, practices, tactics, and techniques are often the same and sometimes learned from the same sources. *Advanced Criminal Investigations and Intelligence Operations: Tradecraft Methods, Practices, Tactics, and Techniques* reveals how intelligence officers and investigators conduct their tradecraft. You'll learn how to plan an operation, how to build an identity and cover story for deep cover operations, and how to detect those who have created false identities for illegal purposes. You'll also get insight into the technical aspects of intelligence (the INTs), counterintelligence, and criminal investigations, and

legal considerations for conducting intelligence investigations. Topics include: A discussion of black bag operational planning HUMINT (human intelligence)—the gathering of information from human sources DAME (defenses against methods of entry), forced entry into buildings, safes and combination locks, and automobile locks PSYOPS (psychological operations) and the use of social networks ELINT (electronic intelligence) and SIGINT (signals intelligence)—electronic interception of intelligence, bugs, wiretaps, and other communications interceptions EMINT (emanations intelligence), which concerns the emanation of data, signals, or other intelligence from C4I systems IMINT (imagery intelligence), involving any intelligence gathered using images Intelligence files and analytical methods Based upon the author's training and experience over more than three decades as a law enforcement investigator and military officer, as well as research conducted as an attorney and in academia, the book provides you with an insider perspective on sensitive covert and overt operations and sources. Supplemented with roughly 140 illustrations and photos, this collection of special skills and reference materials is essential to the professional investigator and intelligence operative.

Essentials of Thermodynamics offers a fresh perspective on classical thermodynamics and its explanation of natural phenomena. It combines

fundamental principles with applications to offer an integrated resource for students, teachers and experts alike. The essence of classic texts has been distilled to give a balanced and in-depth treatment, including a detailed history of ideas which explains how thermodynamics evolved without knowledge of the underlying atomic structure of matter. The principles are illustrated by a vast range of applications, such as osmotic pressure, how solids melt and liquids boil, the incredible race to reach absolute zero, and the modern theme of the renormalization group. Topics are handled using a variety of techniques, which helps readers see how concepts such as entropy and free energy can be applied to many situations, and in diverse ways. The book has a large number of solved examples and problems in each chapter, as well as a carefully selected guide to further reading. The treatment of traditional topics like the three laws of thermodynamics, Carnot cycles, Clapeyron equation, phase equilibria, and dilute solutions is considerably more detailed than usual. For example, the chapter on Carnot cycles discusses exotic cases like the photon cycle along with more practical ones like the Otto, Diesel and Rankine cycles. There is a chapter on critical phenomena that is modern and yet highly pedagogical and contains a first principles calculation of the critical exponents of Van der Waals systems. Topics like entropy constants, surface thermodynamics, and superconducting phase
