The ECO 80 LS is designed as a load sensing directional control valve which will lead to increased machine performance, higher efficiency, reduced cooling requirements and fuel saving compared to conventional directional control valves. ECO 80 LS features PVG load-sensing proportional valves features and benefits summarized in bullets below:

Sectional directional control valves, offers multi-function control valve method to solve hydraulic circuit system requirement. The compact construction design is one of strong features for sectional directional control valves include other features, such as low pressure drop, high efficiency. The sectional valve provides selective operation methods including manual control, hydraulic control, electro-hydraulic and pneumatic control.
